

FROM SPECIALIST TO STRATEGIST

 Leadership development for women in science, technology, or engineering

WHO ATTENDS

New managers or functional specialists slated for future supervisory roles working in ST&E (science, technology, and engineering).

ABOUT THE PROGRAM

Emerging women leaders in ST&E are equipped with the skills and confidence critical for future success in supervisory and management roles. Sessions on strategy, negotiation, and self- and team-management unlock the skills women in ST&E fields need to overcome obstacles, build successful careers, and advance to higher levels in the workplace.

Women learning alongside other women allows participants to build networks of true peers – other women in ST&E fields, at the same career-level, with shared experiences – helping to manage feelings of isolation and self-doubt.

We are proud to collaborate with the Society of Women Engineers (SWE), the world's leading professional organization for women engineers.

LEADERSHIP IMPACT

From Specialist to Strategist serves as the conduit between success at the early-career level and future success in management roles. Participants develop leadership skills that:

- Instill confidence for career success
- Deliver strategy and know-how to the business
- Contribute to dynamic and successful teams and projects

“**The program was so unique and comprehensive—the best professional training experience I’ve ever had.** I was surprised by how powerful and emotional it was. The sessions were thoughtful, relevant, and flawlessly executed. I feel like I have a much better understanding of who I am as a person and who I want to be as a leader.”

- Research Scientist, Aerospace
